

Check GPIO/PWM Driver at /sys/class/pwm

<https://forums.developer.nvidia.com/t/how-do-i-use-pwm-on-jetson-nano/72595/5>

Step 1. Check if pwm driver is already installed in your OS kernel

```
$ls sys/class/pwm
```

```
harry-nano@harry-desktop-nano: /sys/class$ ls /sys/class/pwm
pwmchip0  pwmchip4
```

So in response, we have:
pwmchip0 pwmchip4

Step 2. Check the number of channels for each pwm

First go to pwm folder, then from there to pwmchip0, then do

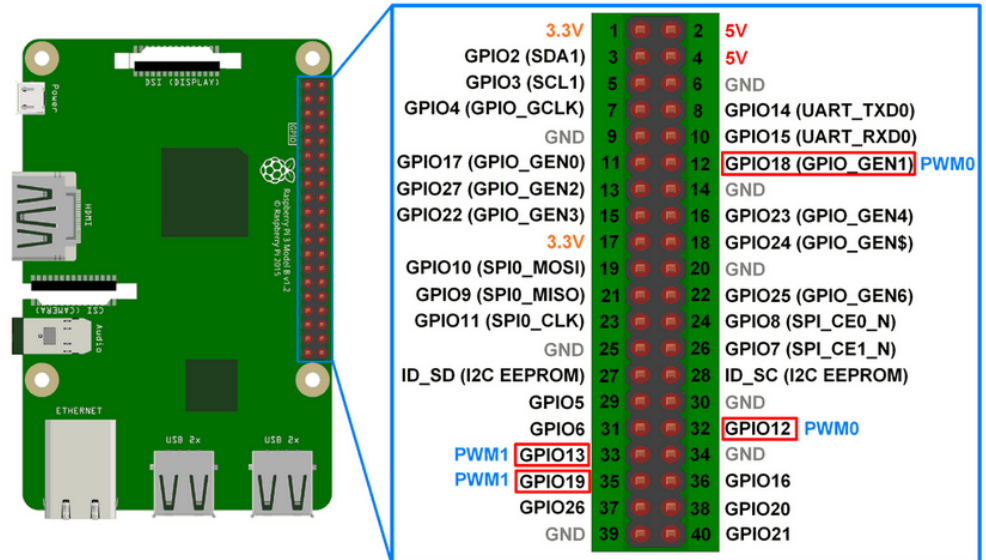

```
$cat npwm //to find number of channels
```

```
harry-nano@harry-desktop-nano: /sys/class/pwm/pwmchip0$ cat npwm
4
```

If you do the same for pwmchip4, you will find 1 channel.
So the total pwm channel is 5.

Step 3. Find the mapping to the connector pins, use the pi pin assignment as a reference (see below)

Pi Pin layout

Jetson Nano J41 Header Pinout for GPIO/PWM

<https://www.jetsonhacks.com/nvidia-jetson-nano-j41-header-pinout/>

Note: I2C and UART pins are connected to hardware and should not be reassigned. By default, all other pins (except power) are assigned as GPIO. Pins labeled with other functions are recommended functions if using a different device tree.

	GND	25	26	SPI_1_CS1	gpio20
	I2C_1_SDA I2C Bus 0	27	28	I2C_1_SCL I2C Bus 0	
gpio149	CAM_AF_EN	29	30	GND
